Sky Peak Technologies Rebrands CORA Mobile Edge to CORA AI, Launches Solutions for Fixed Wireless Access (FWA)

Denver, Colorado – Sky Peak Technologies, a mobile video optimization pioneer, today announced the rebrand of its flagship product to **CORA AI**, alongside the official launch of CORA AI for **Fixed Wireless Access (FWA) routers**. This expansion marks a major milestone in the company’s mission to optimize video delivery at the edge—empowering MNOs and MVNOs to serve more subscribers using their existing infrastructure.

Formerly known as **CORA Mobile Edge**, the rebranded **CORA AI** reflects the platform’s evolution into a dynamic, AI-driven software suite that intelligently shapes over-the-top (OTT) video traffic directly on the device—**without requiring deep packet inspection (DPI), changes to content sources, or core network integration**. Using real-time feedback loops and device-level analytics, CORA AI dynamically adjusts video data streams based on fluctuating network conditions.

“Video traffic is the number one source of network congestion, and throttling is no longer a viable long-term strategy,” said Cat McIntosh, CEO of Sky Peak Technologies. “CORA AI gives operators a smarter, scalable alternative—whether deployed in mobile devices, embedded in the core, or now, inside FWA routers.”

Key Benefits of CORA AI for FWA Routers:

- **Reduce Data Usage by 20% or More**
Deliver smooth, high-quality video while significantly lowering bandwidth consumption.
- **Serve More Subscribers Per Tower**
Expand subscriber density without investing in new spectrum or infrastructure.
- **Accelerate ROI on FWA Deployments**
Improve cost efficiency, maximize asset utilization, and extend network capacity.
- **Support Sustainability Goals**
Lightweight on-device processing minimizes energy use at the edge.

CORA AI is available today to test select FWA routers and customer premises equipment (CPE) via partnerships with OEMs, aggregators, or remote MDM deployment.

For operators looking to scale efficiently and retain high-value customers, CORA AI delivers real-time video optimization that adapts intelligently to subscriber behaviors and network conditions—without latency or complexity. Operators can go from testing CORA AI to a full subscriber deployment in less than 90 days.

About Sky Peak Technologies

At Sky Peak Technologies, we believe everyone should have access to rich digital content—no matter where they live or what devices they use. That’s why we create bold, intelligent technologies that improve data delivery at the edge, helping to make our world more connected, informed, and sustainable.
